## DESCRIPTION

The BLY17 Series Brushless DC Motors come in a compact package with high power density. These motors are cost-effective solutions to many velocity control applications. They come in four different stack lengths to provide you with just the right torque for your application. A number of windings are available off-the-shelf and all the motors can be customized to fit your machine requirements. The motors come in a standard 8-lead configuration with three wires for the phases and five wires for the hall sensors. We can also customize the windings to perfectly match your voltage, current, and maximum operating speed. Special shaft modifications, cables and connectors are also available upon request.
